## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

For clarity of the record the Examiner notes that the reasons for allowance are not based on the Examiner finding the arguments necessarily persuasive, but rather that upon further consideration it appears that the Examiner's logic when making the combination of references was flawed. The Examiner did not find Applicant's arguments regarding the prevention of a "spike-like ripple" persuasive because they are not commensurate with the scope of the claims, and did not find the argument regarding the Fig. 33/21 combination of Shibata persuasive because it equates all Fig. 33 filters 1918 as the "first" filters and filter 1920 as the "second" filter which is not how the Examiner applied that figure in combination with Shibata Fig. 21.

The Examiner considered the two upper track filters in Fig. 33 to be similar to the upper track filter in Fig. 21, with the signal lines from filter 1920 at the right-hand side in Fig. 33 to the underlying filter 1918 being equated with signal line 1502 in Fig. 21, and the signal lines running between the two filters 1918 on the left-hand side in Fig. 33 being equated with the signal line 1501 in Fig. 21, because the filter 1920 is 180° out of phase with the filters 1918 thereby making the signal lines between the rightmost filters 1920/1918 and leftmost filters 1918/1918 180° out of phase in the same fashion as the signal lines 1501 and 1502 in Fig. 21. The Examiner then used the similar Fig. 37 which shows the weighting in the lower filter track rather than the upper filter track to show that the weighting can be done in either a filter in the unbalanced terminal side upper filter track or the balanced terminal side lower filter track. However, what is

common between Figs. 33 and 37 of Shibata et al. is that the weighting is done in the filter track in which the 180° phase shift is implemented. That is, the phase shifted filter in Fig. 33 is filter 1920 in the upper track and therefore the weighting to improve balance is performed in the unbalanced side upper track, whereas in Fig. 37 the phase shifted filter 2201a is in the lower track, and so the weighting to improve balance is done in the balanced side lower track. Following this logic, the weighting in the embodiment of Shibata in Fig. 21 should have been done in the first/upper filter track on the unbalanced terminal side since the first and third 1503 IDTs are phase shifted 180° to provide the phase difference on lines 1501 and 1502. But as plainly visible, the weighting is done in the lower track on the balanced terminal side. Therefore, the logic of the prior combination falls apart, and it is unclear if one of ordinary skill would have been motivated to provide weighting in the upper track/unbalanced terminal side filter instead of or in addition to that already shown in the lower track, since the lower track weighting already solved the known problem in the art at the time of Shibata et al. of improving the amplitude and phase balance of the filter at the balanced terminals. The same logic problem exists with the prior combination of Shibata and Strauss.

Consequently, the prior art of record is not considered to disclose or fairly suggest a balanced-type surface acoustic wave (SAW) filter having each of the specifically recited features, and especially those features emphasized in bold type by Applicants in their remarks and spanning pages 5-6 of the response, including weighting applied to an IDT (interdigital transducer) of the first filter connected to the unbalanced terminal in a balanced/unbalanced conversion SAW filter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
